

### **Activity**

All stages of bridge structure erection and service, including structure design, construction technology and verified calculations, as well as erection supervision, detailed inspections, consultancy and safety condition assessment are covered with Department activity.

Tests of structural, repair, waterproofing and membrane protection (on steel and concrete) materials, as well as bridge equipment, are carried out at the Department. The tests are being made for certification purposes in the area of Approvals issue (certificates required by Polish law), compliance with the existing Approvals and safety mark B certification.

The bridge prove test loading, monitoring of structures under service load and other field bridge structures tests are the crucial part of Department activity.

Bridge engineering technical films are being shot here, as well as technical and advertisement issues are being made.
