

Activity

The Centre, similarly as the Institute, is engaged in research and development works on the construction and maintenance of transportation infrastructure.

Research activities of the Center:

- test of bridge structures,
- inspection of bridge structures,
- laboratory test of materials, structure elements and fittings of bridge structures,
- supervision and technical consultancy in the design and construction of bridge structures,
- design and supervision in the field of prestressing of bridge structures as well as production of prestressed prefabricated elements,
- preparation of technical opinions.
