

### Activity

#### Activity

The Division is divided into two sections: Structures Team and Concrete Laboratory.

The Structures Team provides support in all aspects concerning:

- Research in the frame of safety issues of concrete structures,
- All technical aspects concerning construction, modernization and maintenance of road and rail structures,
- Technical expertises of concrete and masonry structures with the use of different NDT techniques, including GPR and impact-echo,
- Localisation of underground infrastructure with the use of GPR.

The activities of the Concrete Laboratory includes investigating the properties and performance of portland cement concrete, the influence of additives on concrete durability, mortars, concrete products and prefabricated products used in road construction.
