

Activity

- Transport telematics

- Standarization in telematic
- Telematic transport systems design
- Communication systems
- Navigation systems in transport
- Geographical information systems
- Telematic education
- Telematic systems integration
- Road teledetection
- Road traffic information systems
- Weight in-motion systems
- Road weather monitoring and warning systems
- EU road telematic research programs and projects participation

- Transport Policy

- National and regional transport policy
- Coordination of urban policies: for sustainable transport and the land use
- Urban mobility management
- Transportation systems in a smart city
- Reducing air pollution and transport GHG emissions
- Autonomic road transport support systems

- Research works on summer and winter road maintenance

- Investigating materials used in the winter maintenance
- Technical approvals for the road safety equipment
